Sprint Progress Report
Due: 11/17/14

Team: ASM Simulator (team name in github: Team101) Sprint 2 Progress Report

See sprint 2 backlog for reference:

Task Number	Completion Level
1	COMPLETE: We have a complete ISA working. We moved our original plan from implementing the ISA and memory image server side to the client side. The rate of database reads and writes were too slow (10-100 iops/second) for our requirements. On the other hand, given our javascript to read and write from our dom representation of memory, we are able to perform 102249 reads and writes per second which are more than sufficient for our needs.
2	PARTIALLY COMPLETE: We implemented following other users. We have a good amount of work to do here as we still haven't implemented proper project configurations. We still need to configure the following: <ul style="list-style-type: none">1) Create a new project.2) Inside of the new project enter text inside of the textarea and be able to save the textarea and store it in the database.3) Be able to display all the files that were currently created.4) Configure public and private settings on files such that other users can see them pending on the file.
3	INTEGRATE ISA INTO WEB APPLICATION We are also behind in this regard as we haven't been able to properly integrate the ISA into the web application itself.

Overall status:

Overall, we are behind schedule with regards to our sprints. However, we planned our sprints to provide us with some leeway in anticipation of falling behind for any one of our tasks.
